To ensure optimal results, surface preparation is key. Prior to application, ensure the surface is impeccably clean, dry, and devoid of any dust or contaminants such as paint, oil, grease, fluorescence, glue, or old sealers. When in doubt about the substrate's cleanliness, a light sanding with 120-grit sandpaper is recommended for a pristine base.

The application process is straightforward: **ROKSO STAMPOPRIME PLUS** should be evenly applied using a roller or brush in a single coat. Allow a drying period of approximately 4 hours before proceeding to apply your decorative concrete, ensuring a seamless transition and impeccable results.

For porous surfaces, our specialized solution, **ROKSO STAMPOPRIME PLUS**, is the ideal choice, catering specifically to the unique needs of such surfaces.

**ROKSO STAMPOPRIME PLUS** represents the epitome of surface preparation excellence, offering unmatched versatility and performance for a wide array of closed surfaces, making it the go-to choice for professionals and DIY enthusiasts alike.
